

The District Net project was implemented by the Ministry of Local Government to improve communications between the different government levels within a district: parish, sub county, and district headquarters in four different districts: Kayunga, Lira, Mbale and Mbarara.

A 10 minutes video is now available.

It tries to provide transparency at the local government level and to improve the provision of public information through the implementation of ICT.

This was done by introducing data and voice communication links between the districts and lower level government offices as well as introducing electronic data processing in financial management, data communication, data storage and analysis.
